

BODY SCULPT CAVITATION

About

Ultrasonic cavitation technology enables concentrated sonic energy to be directed at localized treatment areas. The vibration of ions, alternating positive and negative sound waves, produces a wave of pressure that fat cells cannot withstand. Fat cell membrane is ruptured and its contents expelled! The expelled fat is partially used for energy and partially metabolized.

Treatment

There are immediate visible results, You will see the difference in shape and fat for up to 10 days! Consecutive treatments can improve results for up to 6 months. Each treatment session is approximately an hour, with no down time after.
