

GLUTATHIONE IV

What Is Glutathione?

Glutathione is a naturally occurring antioxidant made of amino acids. Since it's an antioxidant, it has protective properties that help fight against free radicals -harmful molecules that cause damage to your cells. Glutathione helps neutralize and eliminate toxins from the body, supports the central nervous system, aids in fertility and supports a healthy and strong immune system.

How Long Is The Appointment?

A typical appointment will last about 30 minutes depending on your hydration levels.

Why IV Therapy?

IV nutrient drip therapy involves using an intravenous injection to infuse essential nutrients including important vitamins, minerals, and amino acids directly into a patient's bloodstream at higher levels than could be ingested or absorbed orally. The stomach and intestines have an absorption threshold that when reached will absorb no more. IV therapy can be used to treat patients suffering from a wide variety of dysfunction and disease.

We use only products that are preservative free and contain no artificial ingredients or additives.

What's In It?

- 1-3g Glutathione
- Saline
