

JTECH RANGE OF MOTION

About

Being an evidence-based facility, we strive to collect as much data as possible to show progression throughout care. Our JTECH machine is an assessment tool used to measure range of motion in the body before and after treatment plans. This piece of technology has a 99.9% accuracy rate, and provides our doctors with a detailed summary that allows us to tailor a plan to your needs.

Treatment

During treatment we are able to determine

- Misalignment of the vertebra and its effects
- Quantify ROM and Strength
- Provide an instant report of your findings
- Show progress from previous exams

If you have stiffness or painful range of motion, have weakness or a loss of strength from injury, trauma, or lack of use, please speak with one of our providers about how JTECH could benefit you!

Please contact our front desk to take advantage of this service and set up an appointment
