MYERS COCKTAIL IV

About Myers IVs

A Myer's Cocktail can be used to treat a broad variety of conditions, including infections, cold and flu, fatigue, depression, hypertension just to name a few. This IV takes only 15-30 minutes. This is our most popular IV drip. Many patients make this a weekly or monthly ritual.

Why IV Therapy?

IV nutrient drip therapy involves using an intravenous injection to infuse essential nutrients including important vitamins, minerals, and amino acids directly into a patient's bloodstream at higher levels than could be ingested or absorbed orally. The stomach and intestines have an absorption threshold that when reached will absorb no more. IV therapy can be used to treat patients suffering from a wide variety of dysfunction and disease.
