

VITAMIN C IV

About

Vitamin C plays an important role in your health. You need vitamin C for the growth and repair of tissues in all parts of your body. It helps the body make collagen, an important protein used to make skin, cartilage, tendons, ligaments, and blood vessels. Vitamin C is needed for healing wounds, and for repairing and maintaining bones and teeth. Often times patients will use this IV a few times per month.

Why IV Therapy?

IV nutrient drip therapy involves using an intravenous injection to infuse essential nutrients including important vitamins, minerals, and amino acids directly into a patient's bloodstream at higher levels than could be ingested or absorbed orally. The stomach and intestines have an absorption threshold that when reached will absorb no more. IV therapy can be used to treat patients suffering from a wide variety of dysfunction and disease.

We use only products that are preservative free and contain no artificial ingredients or additives.

What's In It?

- 50g Ascorbic Acid (Vit C)
- Potassium
- Calcium
- Magnesium
- Sodium Bicarbonate
